

Exercise 7

EE312 Fall 2014

Practicing C++ Constructors, Destructors, and Basic Operators

In this exercise, you will solve some problems based on the first round of C++ language features discussed in class. All of the programs are very short and simple. The goal is to actually see the language features in action so that we can give the basic C++ concepts a chance to sink in. You'll find the problems in the .cpp file for this exercise. Just write your answers to the questions in comments, and update or write the C++ functions as necessary. There probably won't be time to do every problem in the file, so focus on problems 1, 4 and 5 for now. Good luck!
